|   |   | And Gate |   | Actual |
|---|---|----------|---|--------|
|   |   | A        | B |        |
| 1 | → | 0        | 0 | 0      |
| 2 | 0 | 0        | 1 | 0      |
| 3 | 1 | 0        | 0 | 0      |
| 4 | 1 | 1        | 1 | 1      |

$$\omega_1 = 1.2 \quad \omega_2 = 0.6$$

Threshold = 1 ✓

Learning rate =  $\eta = 0.5$

$$y = f(\omega^T x)$$

1st instance

$$y = \omega_1 x_1 + \omega_2 x_2$$

$$= 1.2 \times 0 + 0.6 \times 0$$

$$y = 0 < 1$$

$$= 0 \quad \checkmark$$

2nd instance

$$y = \omega_1 x_1 + \omega_2 x_2$$

$$= 1.2 \times 0 + 0.6 \times 1 = 0.6 < 1$$

$$y = 0$$

3rd instance

$$y = \omega_1 x_1 + \omega_2 x_2$$

$$= 1.2 \times 1 + 0.6 \times 0 = 1.2 > 1$$

$$w_{i+1} = w_i + \eta \times \text{ex } x_i$$

= 1  
→ Steepest Descent  
→ (Actual - predicted)

$$w_1 = 1.2 + 0.5 (-1) \times 1$$

$$= 1.2 - 0.5 = 0.7$$

$$w_2 = 0.6 + 0.5 (-1) \times 0 = 0.6$$

Instance 4

Instance 4

$$y = w_1 x_1 + w_2 x_2 \\ = 0.7 \times 1 + 0.6 \times 1 = 1.3 > 1 \\ = 1 \quad \checkmark$$

Step 2

1st instance

$$y = w_1 x_1 + w_2 x_2 \\ = 0.7 \times 0 + 0.6 \times 0 = 0 < 1 \\ = 0$$

So final

weights

$$w_1 = 0.7, w_2 = 0.6$$

fischer LDA

Q: factory produces very expensive & high quality chips & rings that their qualities are measured in terms of curvature  $(C)$  & diameter. Results shown below:

| Curv (C) | D    | Result. (O/P)                   |  |
|----------|------|---------------------------------|--|
| 2.95     | 6.63 | P                               |  |
| 2.53     | 7.79 | P                               |  |
| 3.57     | 5.65 | P                               |  |
| 3.16     | 5.47 | P                               |  |
| 2.58     | 4.46 | NP                              |  |
| 2.16     | 6.22 | NP                              |  |
| 3.27     | 3.52 | NP                              |  |
| ,        | ,    |                                 |  |
|          |      | $y = \{ \text{P}, \text{NP} \}$ |  |

New chip ring width  
 $C = 2.81$   
 $D = 5.45$   
is passed  
NOT passed.
